No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

The middle region (see AAV31986) and 3' region (see AAV31987) of the clone are also provided. The murine DS-CAM clone was isolated from a CS7 Black/6 mouse brain cDNA library using human DS-CAM cDNA (see AAV31988) and AAV31989) probe. The invention also provides human DS-CAM proteins (see AAV42086-87), as well as expression vectors and host cells,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  transgenic animals, antisense oligonucleotides, and primers useful for amplification of DS-CAM nucleic acids. DS-CAM polypeptides are associated with developmental and neurological processes. They can be used in e.g. neural prosthetic devices used in entubulation methods of repairing (regenerating) damaged or severed peripheral nerves. The products can also be used in detection, diagnosis and therapy of developmental and neurological abnormalities such as Down syndrome, mental retardation, holoprosencephaly, agenesis of the corpus callosum, or schizencephaly. Antisense oligonucleotides are used for inhibiting translation of mRNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Claim

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Qy
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               В
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Qy
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Вþ
DS-CAM2 (see AAW42087), an extracellular, soluble protein belonging to a novel subclass of the 19 superfamily with highest homology to neural cell adhesion molecules. A modified direct CDMA selection technique was applied to bacterial and Plartificial chromosomes between ETS2 and MX1 by using CDMA from trisomy 21 human foetal brain. A unique cDNA fragment, designated E51 (see AAV31982), was obtained and used to screen a trisomy 21 human foetal brain (14-wk gestation) cDNA library. Further clones were obtained by exon trapping, and the complete DS-CAM2 CDNA sequence was identified. DS-CAM2 is a splice variant of membrane-bound DS-CAM1 (see AAW42086) and is deleted for the entire transmembrane domain. The DS-CAM gene spans 900-1200 kb of genomic DNA and maps at chromosome
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     signal transduction; trisomy 21; mental retardation; holoprosencephaly; corpus callosum agenesis;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       transgenic animals, antisense oligonucleotides, and primers useful for amplification of DS-CAM nucleic acid. DS-CAM polypeptides are associated with developmental and neurological processes. They can be used in e.g. neural prosthetic devices used in entubulation methods of repairing (regenerating) damaged or severed peripheral nerves. The products can also be used in detection, diagnosis and therapy of developmental and neurological abnormalities such as Down syndrome, mental retardation, holoprosencephaly, agenesis of the corpus callosum, or schizencephaly. Antisense oligonucleotides are used for inhibiting translation of mRNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                21q22.2-22.3. The invention also provides murine DS-CAM partial sequences (see AAV31985-87), expression vectors and host cells,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       В
                    gestation) CDNA library. Further clones were obtained by exon trapping. The complete DS-CAM1 cDNA sequence was deduced from overlapping clones. A splice variant cDNA (see AAV1988), encoding non-membrane bound DS-CAM2 (see AAV4087), was also identified. Th DS-CAM gene spans 900-1200 kb of genomic DNA and maps at chromosome 21q22.2-22.3. The invention also provides murine DS-CAM partial sequences (see AAV1985-87), expression vectors and host cells, transgenic animals, antisense oligonucleotides, and primers useful for amplification of DS-CAM nucleic acid. DS-CAM polypeptides are associated with developmental and neurological processes. They can
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          1130
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              AAV31981 standard; cDNA; 6604
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              1190
                                                                                                                                                                                                                                                                                                        DS-CAM1 (see AAW42086), a cell surface glycoprotein belonging to a novel subclass of the 1g superfamily with highest homology to neural cell adhesion molecules. A modified direct cDNA selection technique was applied to bacterial and Pl artificial chromosomes between ETS2 and MX1 by using cDNA from trisomy 21 human foetal brain. A unique cDNA fragment, designated E51 (see AAV31982), was obtained and used to screen a trisomy 21 human foetal brain (14-wk
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         mat_peptide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                sig_peptide

The products can also be used in detection, diagnosis and therapy of developmental and neurological abnormalities such as Down syndrome, mental retardation, holoprosencephaly, agenesis of the corpus callosum, or schizencephaly. Antisense oligonucleotides are used for inhibiting translation of mRNA.

This is cDNA clone ethb0018f2. It was isolated from human foetal brain cDNA using a novel method for identifying genes encoding novel secreted or membrane associated proteins. The method involves: (i) liquiting a library of cDNA to DNA such as vector prAP3 (see AV27206) encoding alkaline phosphatase (AP) that lacks signal peptide and membrane anchor sequences (see AAM55047); (ii) transforming bacteria with the products; (iii) transferring, separately, DNA from (some of) the bacterial clones into mammalian cell library that expresses AP; and (v) identifying the corresponding clone in the bacterial library, isolating the mammalian DNA from it and sequencing, ethb0018f2 was characterised mammalian DNA from it and sequencing, ethb0018f2 was characterised as a contains the followed the sequencing ethboring molecule (see
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  signal peptide; alkaline phosphatase;

                                                                                                                                                                                                                                                                                                                                                                                             in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral neuropathy and localised neuropathies and central nervous system diseases, such as Alzheimer's, parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, and Shy-Brayer Syndrome. Other uses include the utilisation of the activities such as: Inmune system suppression, Activing activity, chemotactic/chemokinetic activity, haemostatic and thrombolytic activity, cancer diagnosis and therapy, drug screening, assays for receptor activity, arthritis and inflammation, leukaemias and

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           This is the nucleotide sequence of Herpes simplex virus ICP4 used in the method of the invention as modulators of apoptosis. The method; and products can be used to identify compounds which modulate (stimulate or inhibit) apoptosis in cells. They can be used to immortalise cells for the study of these cells or for growing cells in large numbers for the productions of proteins. They can also be used for stimulating apoptosis in cells, e.g. for treating a subject with a HSV infection.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Use of herpes simplex virus U(s)3 polypeptide - for developing products for modulating apoptosis in cells and for identifying compounds which act as stimulators or inhibitors of apoptosis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             22-OCT-1998.

                                                                                                                                                                                                                                                                                                                                                                                                                               The herpes simplex virus (HSV) alpha-4 gene encodes infected cell protein number 4 (1CP4). Both the alpha-4 gene and ICP4 can be used to block cell apoptosis. Similarly the administration of an agent that inhibits ICP4 or the alpha-4 gene can induce apoptosis in HSV infected cells. This can be used for the immortalisation of cells, production of proteins, gene therapy, or inhibition of cell death induced in vivo. They can also be used for production of therapeutics comprising inhibitors of HSV ICP4 function, useful for treating HSV function.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                W09804709-A2

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                reaction protein, PKDREJ or P3. PKDREJ is a serm protein involved in binding the sperm to the egg and/or triggerin; the acrosome reaction. It exhibits homology to human polycystin-1 and surke. It can be used to identify antibodies or proteins that block the acrosome reaction and compounds that trigger acrosome reaction in the absence of zona pellucida. Molecules that enhance the efficacy of the acrosome reaction protein can be used to increase fertility and those blocking its action can be used as contraceptives. DNA encoding PKDREJ can be used in gene therapy and also as primer or probe for identifying sequences that encode mutant forms of acrosome reaction protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 W09964457-A1
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Claim 8; Fig 3; 40pp; English.

Compounds that inhibit HSV L/ST synthesis may be used as anti-HSV virucides. The HSV-1 DNA sequence in the region of the L/STs

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            A P.glumae PGJ genomic library was constructed in cosmid vector c2RB. The lipA gene was isolated by screening with probes based on the vector library and a lipa sequence of the P.glumae librase. Immediately downstream of the lipA yene was found a second open reading frame, designated ORF2. It is ORF2 which encodes the lipase-specific designated ORF2. It is ORF2 which encodes the lipase-specific designated ORF2.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Microorganism for use in detergents - contains lipase gene and a translocation or stabilisation gene, used to produce an efficient
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   WPI; 1992-010138/02

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention relates to the CHC (cyclohexanccarboxylic acid) operon of the streptomyces collinus (AAA97538). This operon encodes enzymes involved streptomyces collinus (AAA97538). This operon encodes enzymes involved characteristic pathway: AnsuZA9). In the shikimic acid-CHC-COA biosynthetic pathway: AnsuZA9Ns (AAB23249). Characteristic pathway: AnsuZA9Ns (AAB23251), and ansu (AAB23250). Characteristic pathway: AnsuZA9Ns (AAB23251), and answ (protein sequence not given in the specification). The invention case of the sequence and answ genes, to also relates to the isolated ansuZA9Ns, ansuZ, chcA and answ genes, to callo relates to the isolated ansuZA9Ns, ansuZ, chcA and answ genes, and a grown cassettes comprising at least one of these genes, and a compression cassette. In the host cell comprising such an expression cassette. In the host cell is a bkd mutant of streptomyces avermittilis constitutive erms promoter. This comprision the control of the constitutive erms promoter. This comperon under the control of the constitutive erms promoter the control of the constitutive erms able to produce the comprision of the constitution of the control of the constitution of the control of the con
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present sequence is a putative coding sequence for the corn 1-deoxy-D-xylulose 5-phosphate synthase enzyme (DXPS). Its protein is 1-deoxy-D-xylulose 5-phosphate synthase enzyme (DXPS). Its protein is 1-nvolved in the isoprenoid biosynthesis pathway. The cDNA was identified by sequencing a number of clones and then comparing their protein to the sequences to known proteins: this showed the sequence's similarity to the capsicum annuum DXPS sequence. The DXPS gene and protein can be used to create transgenic plants which express the gene at either different create transgenic plants which express the gene at either different levels or at different stages of development compared to normal, and to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Polynucleotide encoding 1-deoxy-D-xylulose 5-phosphate synthase enzyme useful for producing transgenic plants and for producing antibodies specific to which is useful for screening cDNA expression libraries -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       03-DEC-1998;

                                                                                                                                                                                                                                                                                                                                                                                                           The sequence is that of the gene encoding the human KA-2 receptor, a kainate high affinity receptor of the EAA2 (Excitatory Amino Acid) tamily. The sequence can be used in the identification of sequence related genes. It can also be used to produce calls able to produce the receptor, these cells and membrane fragments of them can be used to assay compounds for binding affinity to human EAA receptor i.e. to screen compounds for potential use as drugs against CNS disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Isolated polynucleotide encoding human excitatory amino acid-2 receptor - useful for determining binding affinity of cpds. fo the receptor in assaying for drugs to treat CNS disorders
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Kamboj R,

It was isolated from a phagemid in a soil DNA library using as probe a gene fragment (AAM63588) obid. by amplification of soil DNA using degenerate primers (AAM63548-49) based on conserved portions of family F cellulases. It was sequenced by primer walking over the phagemid insert using the same degenerate primers as initial extension primers. Subsequent extension primers were constructed by examining the previously generated sequence data. The novel by examining the previously generated sequence data. The novel by availanase gene can be used for prodn. of xylanase for industrial

Genomic Sciences Center and Genome Science Laboratory in RIKEN.

Division of Experimental Animal Research in Riken contributed to prepare mouse tissues. First strand CDNA was primed with a primer prepared by using trehalose thermo-activated reverse transcriptase and subsequently enriched for full-length by cap-trapper. Second and subsequently enriched for full-length by cap-trapper. Second strand cUNA was prepared with the primer adapter of sequence [5' strand cUNA was prepared with the primer adapter of sequence [5' strand CNA was prepared with Bamil CONA of size comprised longer than 7 kb was with Bamil and Xhol. cDNA of size comprised longer than 7 kb was with Bamil Inost: pnilo Bamil In
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Shibata,K., Itoh,M., Aizawa,K., Nagaoka,S., Sasaki,N., Carninci,P., Konno,H., Akiyama,J., Nishi,K., Kitsunai,T., Tashiro,H., Itoh,M., Sumi,N., Ishii,Y., Nakamura,S., Hazama,M., Nishine,T., Harada,A., Yamamoto,R., Matsumoto,H., Sakaguchi,S., Ikegami,T., Kashiwagi,K., Yijiwake,S., Inoue,K., Togawa,Y., Izawa,M., Ohara,E., Watahiki,M., Yoneda,Y., Ishikawa,T., Ozawa,K., Tanaka,T., Matsuura,S., Kawai,J., Okazaki,Y., Muramatsu,M., Inoue,Y., Kira,A. and Hayashizaki,Y.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      (http://www.jax.org/resources/documents/dnares/). The DNA was hydrodynamically sheared by repeated passage through a 0.005 inch orifice at constant velocity. The sheared DNA was blunt end-repaired with T4 DNA polymerase and T4 was blunt end-repaired with T4 DNA polymerase and T4 polymerase were polymedevide kinase. Adaptor oligonucleotides were ligated to the blunt ends in high molar excess. The adaptored DNA was purified and size-selected for a 9.5 to 10.5 kb range using preparative agarose gel 10.5 kb range using preparative agarose gel 10.5 kb range using preparative agarose gel 110.5 kb range using preparative ag

US-08-843-659-1/c

Patent No. 6218103

GENERAL INFORMATION:

APPLICANT: Leopardi,
APPLICANT: Roizman,
TITLE OF INVENTION:
TITLE OF INVENTION:

Bernard Roasrio

HERPES SIMPLEX VIKUS US3 AND ICP4 AS INHIBITORS OF APOPTOSIS

NUMBER OF SEQUENCES: 6
CORRESPONDENCE ADDRESS:

E: Arnold, White & Durkee p.O. Box 4433

Sequence 1, Application US/08843659

```
ORGANISM: Herpes simplex virus
STRAIN: Herpes Simplex Virus Type 1
US-08-458-568A-11
                                                                                                                                                                                                                                                                                                                                                                                                                     Вþ
                                                                                                                                                                                                                                                                                                                                                                                                                                                    ş
